SLIM SHOT

M.I.C. + VITAMIN B12

Patients on the HCG Diet or any diet may wish to maximize their weight loss by receiving our compounded preparation of B12 injections combined with lipotropic amino acids. The lipotropics are a combination of three amino acids which decreases the deposits and speeds up the removal of fat within the liver. All three of these compounds combined enhance liver function and increase the flow of fats and bile from the liver and gallbladder.

M.I.C. contains: **Methionine, Inositol** and **Choline**

- **Methionine** is one of the sulfur-containing essential amino acid that breaks down fats during metabolism. Your body does not produce this amino acid on its own and it must be obtained from methionine rich foods or through supplements. It acts as a lipotropic agent to prevent excess fat buildup in the liver and the body, is helpful in relieving and preventing fatigue, and may be useful in some cases of allergy because it reduces histamine release. In some cases, more methionine is needed to deactivate estrogens when estrogen levels are elevated to prevent the increased estrogens from reducing the flushing of fat from the liver and increasing cholesterol levels.
Patients with a sulfa allergy should not take this vitamin cocktail.
- **Inositol**, a nutrient belonging to the B vitamin complex, is closely associated with choline. It aids in the metabolism of fats, contributes to boosting the immune system, and helps reduce blood cholesterol. Inositol participates in the action of serotonin, a neurotransmitter known to control mood and appetite.
- **Choline** helps break down accumulating fats in the liver and lowers cholesterol deposits. Moreover, it is required for the transport and metabolism of fats and cholesterol within the body, which is important for the healthy support of the endocrine, cardiovascular, and hepatic systems. It is also known to help with the ability to focus and also aids in boosting the immune systems. It is also known to help with the ability to focus and also aids in boosting the immune system. An essential amino acid that breaks down fats during metabolism. Your body does not produce this amino acid on its own and it must be obtained from methionine rich foods or through supplements. It is also a powerful antioxidant that protects the body from free radical damage obtained from toxic metals and it is known to help support healthy skin, hair and nails.

Methylcobalamin B12 is an energy booster and is among the most important of all B-Complex vitamins which helps with the metabolism of fats and carbohydrates. It also helps the growth of healthy blood cells, nerve cells and proteins in the body.

SLIM SHOT INJECTION

M.I.C. + VITAMIN B12

SLIM SHOT is a great ultimate trimming shot to help you burn more fat and gain more energy! This is a unique combination of amino acids, vitamins and energy enhancers to help maximize your weight loss, burn more fat, and give you the ultimate energy that your body needs.

DIRECTIONS: Inject up to 1 milliliter intramuscularly every day as directed by your physician.

A valid prescription is required.
